Page 3, before the paragraph beginning on line 3, insert the heading --BRIEF DESCRIPTION OF THE DRAWINGS--; and on page 3, before the paragraph beginning on line 9, insert the heading --DESCRIPTION OF THE PREFERRED EMBODIMENTS--.

Page 3, please correct the paragraph beginning on line 9, to read as follows:

--With reference to the attached figures, 1 indicates in its whole, a mould according to the invention, essentially consisting of a tray 2 made of walls with substantially consistent thickness and in which the product to be cooked or heated is inserted and that is provided, on the upper side of its diverging side walls, with an edge 3 essentially consisting of a wing projecting outwards and which projects by a greater extent than its width. The bottom wall of tray 2 is flat.--

## IN THE CLAIMS:

Cancel claims 1/8 inclusive and substitute therefore the following claims:

--9. A flexible mould for confectionary and bread-making, comprising:

a silicone tray comprising a bottom wall and side walls extending upwardly from the bottom wall, each side wall having an upper edge;

the silicone tray including a silicone wing extending

outwardly from the upper edge of each of the side walls with the wing extending around the perimeter of the side walls; and

a support element fixed to a lower surface of the wing at an outer end of the wing and extending entirely around the wing, the support element made of less flexible material than the silicone of the wing so that the wing resists deformation under strain caused by content of the tray when the tray is lifted.

- 10. A flexible mould according to claim 9, wherein the bottom wall and side walls have substantially constant wall thickness.
- 11. A flexible mould according to claim 10, wherein the side walls diverge outwardly and upwarely from the bottom wall.
- 12. A flexible mould according to claim 11, wherein the support element comprises a support member made of plastic or metal and encased in the silicone of the wing by dipping of the support element in silicone.
- 13. A flexible mould according to claim 11, wherein the support element is made of metal and has a rectangular cross section and is at least partly encased within the silicone of the wing.

14. A flexible mould according to claim 11, wherein the wing has a substantially constant wall thickness up to a vicinity of the support element, the support element being encased within the silicone of the wing. --
